## Self-Laminating Labels

This "trick" Label is used when the customer needs to add secondary information to a label and bury it under the laminate.

When the end users receive the labels, they write the necessary information, peel the liner off and rub the clear laminate down.

## How We Do It....

We print the label in the usual fashion, such as, flexo, hot stamp foil or letter press. We then attach the laminate in the usual manner during the printing process. The difference between this label and the standard label is, we back slit the liner and remove half of it just before laminating and die cutting. This method creates the flap effect for the customer's use
